Former-interface physicochemical surface phenotype: VHH (N=533) vs conventional VH (N=1429)
Rendering logic adapted from Raybould et al. 2019 Fig. 2 (CDR-vicinity target) -> empirical former VH-VL interface target

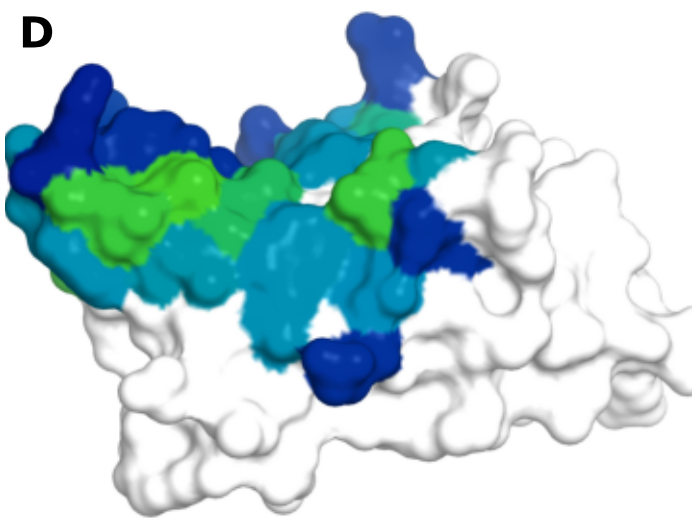

VH-VL native pairing
(orange = frozen 28-position former interface;
pink = VL, translucent)

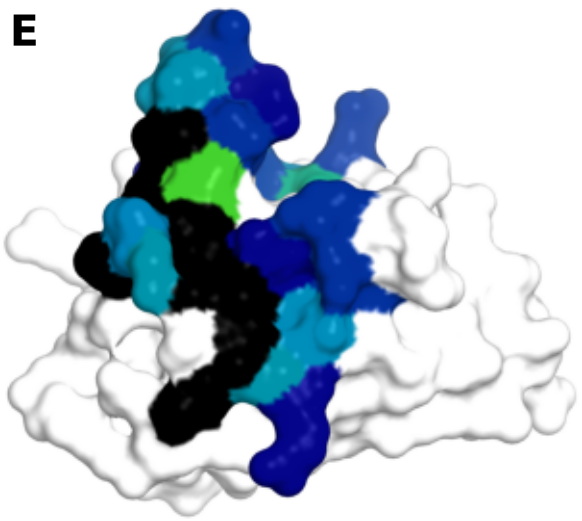

VHH exemplar (PSH 95th-percentile nearest match)
pdb_00008f6v / pdb_00008f6v-A, PSH=96.5

conventional VH exemplar (PSH 95th-percentile nearest match)
pdb_00006wo3 / pdb_00006wo3-H-L, PSH=113.6 (VL hidden for surface viz)

VHH: largest connected hydrophobic patch (black outline)

VH: largest connected hydrophobic patch (black outline)
